

Amfibi XL

Amfibi XL is a hygiene chair designed with bariatric users in mind. With a maximum user weight of 250kg, 67cm internal width and electric height adjustment, Amfibi XL hygiene chair provides stability and comfort for the user while requiring minimal effort for the care staff.

Suitable for bariatric users

Maximum user weight for the Amfibi XL is 250kg and seat depth is larger than standard. The hygiene chair also has an internal width of 67cm to provide extra room and good stability.

Durable materials

Manufactured from corrosion-proof materials

Lockable armrests

Amfibi XL has armrests that can be flipped up and locked in position to make it easier for the patient to be of help with the transfer.

Built-in soft seat

The XL's seat and back are adapted for an upright posture that does not close the pelvis. The soft, ergonomic seat (PU) is standard and built in to the chair. It minimises pressure on the hips, tendons and blood vessels and is designed to suit both men and women.

Easy to clean

The seat is easy to remove and clean, while its rounded front edge contributes to a comfortable leg position.

Easy control

Electrical adjustment via a cabled remote which is sealed to a high protection class (IP66) for optimal safety

Adjustable back strap

The soft, comfortable back-strap reduces pressure on bony prominences. It is easily adjustable for best support and seat depth. Machine washable.

Directional locking/lockable castors

One of the castors can be locked directionally for improved safety during transit. The other castors are lockable.

Swing away, detachable footrests

The footrests flip up, swing away and are easily detachable.

Electric height adjustment

Amfibi XL has a unique pillar design for quick and easy seat height adjustment. The seat can be raised by up to 81cm from its lowest position and thus requires minimised effort from care personnel.
